Options of 80UC DEPOSITORY

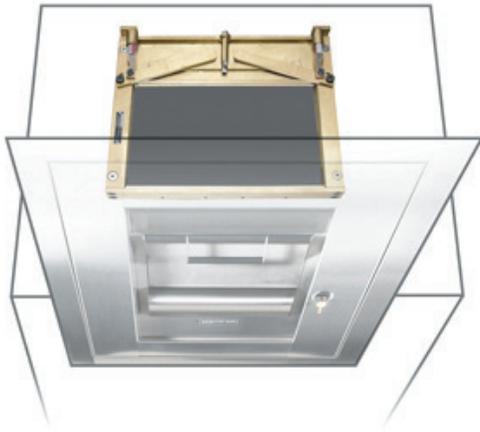

The 80UC head can be combined with multiple chest and chute options to form an integrated depository system

To build your Hamilton 80UC Depository System, chose from options that include:

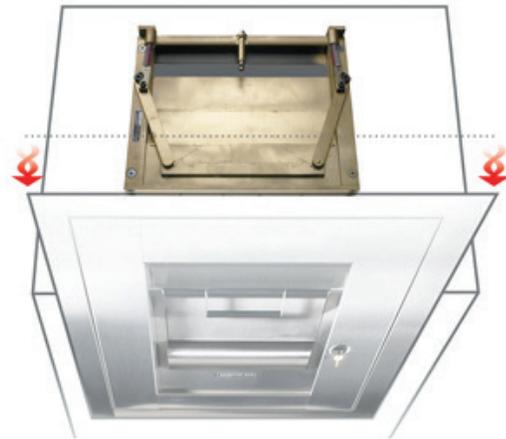

- Chutes to accommodate virtually any wall thickness
- Composite or Steel Plate UL-Listed chests
- Chute closure device
- Camera Port Kit to record the identity of people making deposits
- Secured housings and cladding
- Heat sensors, door contacts and seismic detection for chests
- Now prepped for an optional light
- Optional integrated stainless envelope holder
- Light fixture

Optional UL-listed closure device adds security to new and retrofit night depositories

Night depository path is clear and open as long as depository face is in place.

If depository head is removed, closure device snaps shut instantly to deny access to chest and its contents.
